

We build the systems governments run on.

Cozyplus is a software engineering company with production work in traffic enforcement AI, land and tax administration, and consumer platforms used by hundreds of thousands of people. Every project is delivered with documentation, training and full handover.

8

years building software

40

engineers, designers and delivery staff

3

countries with production systems

7

systems in production today

01 Company

Legal name	Cozyplus FZ LLC
Trading as	Cozyplus Technologies
Founded	2018
Headquarters	IT Plaza, Dubai Silicon Oasis, Dubai
Team	40 engineers, designers and delivery staff
Offices	Dubai · Riyadh · Ramallah

02 Capabilities

AI and computer vision

Detection, classification and language systems that run in production, on your hardware if needed.

You receive: Trained models with evaluation reports · Inference pipeline and review tooling · Monitoring, retraining plan and drift alerts · On-premise or sovereign-cloud deployment

Web platforms and digital transformation

Case management, registries, portals and back-office systems that replace paper and spreadsheets.

You receive: Process maps and data model · Migrated and reconciled records · Web application with audit log · Citizen portal and payments integration

Mobile applications

Native iOS and Android apps, published and maintained.

You receive: iOS and Android apps · Store listings and release management · Crash and performance monitoring · Accessibility and bilingual UI

Operations and support

We keep running what we build, with response times written into the contract.

You receive: Support agreement with SLAs · Monitoring and incident reports · Quarterly security and cost review · Knowledge transfer to your team

03 Reference projects

Tahakom

Saudi Arabia · 2018–present

Phone and seat-belt violation detection

Computer vision that flags phone use and unbuckled belts from roadside cameras, in production across Saudi Arabia since 2018.

- In production, nationwide

Land and Tax Department, Palestine

Palestine · 2026

Digital transformation of the Land and Tax Department

Paper land and tax records moved into a single secure system with citizen-facing services.

- Delivered and handed over

Own product

Saudi Arabia · 2024–present

Tafawaq

Preparation platform for the Saudi Qudrat and Tahsili exams, used by more than 16,000 students.

- Live — web, iOS, Android

Own product

United States / global · 2019–present

Quizplus

AI study platform used by more than 10 million students, covering 30+ fields with AI videos, quizzes, flashcards and textbook solutions.

- Live — web and iOS

04 Leadership

Abdulhafeth Salah

Chief Executive and Founder
Serial entrepreneur with 15 years of building and scaling startups. Co-founded Quizplus and led it from scratch to a \$30m valuation in four years. Experienced in scaling products, teams and operations for sustainable growth.

Dr Mahdi Washaha

Chief Technology Officer and Co-founder
PhD in Artificial Intelligence. Leads technology strategy and builds scalable, high-performance systems. Co-founder and CTO of Quizplus, and the architect of the automatic traffic-violation detection that has run across Saudi Arabia since 2018, long before the AI wave.

05 How we deliver

1

Discovery

Two to four weeks with your team to map processes, data and constraints. You receive a written scope, architecture and estimate you can attach to a tender.

2

Build in the open

Working software every two weeks, on your infrastructure when required. Your stakeholders see progress rather than status reports.

3

Verify

Security review, load testing and user acceptance with your staff before anything is called done.

4

Hand over and support

Documentation, training and a support agreement with defined response times. You own the code.

06 Compliance and security

Data residency and sovereignty

We deploy on-premise, in government clouds and in sovereign regions. Data location, encryption at rest and in transit, and key management are agreed in writing before build starts.

Security

Role-based access, full audit logs and least-privilege infrastructure are standard. We support independent penetration testing before go-live and fix findings as part of the contract.

Ownership and handover

You own the source code and the infrastructure. Every engagement ends with documentation, training and a handover checklist signed by your team.

Arabic and accessibility

Interfaces are designed bilingually with proper right-to-left layout, Hijri and Gregorian dates, and Arabic content handling. We target WCAG 2.1 AA.

Procurement readiness

We respond to RFPs and RFIs with fixed-scope or time-and-materials pricing, and we are registered to contract directly in the UAE, Saudi Arabia and Palestine. Registration documents are available on request.

Support

Support agreements define response and resolution times by severity, with a named engineer and monthly reporting.
